# Audit Summary

This report has been prepared for Dogstonks Token on the Binance Chain network. Novos provides both clientcentered and user-centered examination of the smart contracts and their current status when applicable. This report represents the security assessment made to find issues and vulnerabilities on the source code along with the current liquidity and token holder statistics of the protocol.

A comprehensive examination has been performed, utilizing Cross Referencing, Static Analysis, In-House Security Tools, and line-by-line Manual Review.

The auditing process pays special attention to the following considerations:

- Ensuring contract logic meets the specifications and intentions of the client without exposing the user's funds to risk.
- Testing the smart contracts against both common and uncommon attack vectors.
- Inspecting liquidity and holders statistics to inform the current status to both users and client when applicable.
- Assessing the codebase to ensure compliance with current best practices and industry standards.
- Verifying contract functions that allow trusted and/or untrusted actors to mint, lock, pause, and transfer assets.
- Thorough line-by-line manual review of the entire codebase by industry experts.

# Contract Ownership

The contract ownership of DOGSTONKS is not currently renounced. The ownership of the contract grants special powers to the protocol creators, making them the sole addresses that can call sensible ownable functions that may alter the state of the protocol.

01

The current owner is the address 0xd889e7bdfe28a6718c18545f6f437a8642941435 which can be viewed from: HERE

02

The owner wallet has the power to call the functions displayed on the priviliged functions chart below, if the owner wallet is compromised this privileges could be exploited.

03

We recommend the team to renounce ownership at the right timing if possible, or gradually migrate to a timelock with governing functionalities in respect of transparency and safety considerations.

# Important Notes To The Users:

O1 The owner cannot stop trading.

Owner can change the claimWait for dividends between 1 hour and 24 hours.

02 The owner cannot blacklist wallets.

08 \_maxWalletAmount = (\_totalSupply \* 1) / 100.

- On sells there is an increase of tax based on the fees, this new tax cannot be higher than 20%.
- Owner can change and configure the dividendTracker with no constrains.

- Owner can enable trading but cannot pause or disable it.
- swapThreshold = \_totalSupply / 10000 \* 42; // 0.42%.

- Owner can change the maxSellTransactionAmount but it cannot be less than 10,000 tokens.
- Owner can add/remove wallets from fee exemption and dividends.

- \_allowances[sender][msg.sender] =
  \_allowances[sender][msg.sender].sub(amount,
  "Insufficient Allowance");
- Owner can change the minimum token balance needed to get dividends. No high-riskExploits /Vulnerabilities Were Found in token Source Code.

### Technical Findings Summary

Classification of Issues

#### **Total**

What you should pay attention to **Total** Medium High Bugs or issues with that may be subject to Medium High Exploits, vulnerabilities or errors that will certainly exploit, though their impact is somewhat or probabilistically lead towards loss of funds, limited. Issues under this classification are **FOXY Token** control, or impairment of the contract and its recommended to be fixed as soon as possible. functions. Issues under this classification are recommended to be fixed with utmost urgency Info Low Info Low Consistency, syntax or style best Effects are minimal in isolation and do not pose a practices. Generally pose a negligible significant danger to the project or its users. Issues under this classification are recommended to be fixed level of risk, if any.

nonetheless.

# Findings

Public function that could be declared external

ID	Severity	Contract	Function
01	Informational	Dogstonks	Functions: size, getKeyAtIndex, getIndexOfKey

#### Description

Gas Optimization. Public function that could be declared external

#### Recommendation

Public functions that are never called by the contract should be declared external to save gas.

# Findings

Missing events arithmetic

ID	Severity	Contract	Function
02	Informational	Dogstonks	Missing events for setWalletBalance, setMaxBuyTransaction, setMaxSellTransaction, setSwapTokensAtAmount, setSellTransactionMultiplier

#### Description

Functions that change critical arithmetic parameters should emit an event.

#### Recommendation

Emit corresponding events for critical parameter changes.
